PRESS RELEASE

Professional Water Technologies Products Receive Approvals in England, Wales, Scotland and Israel and Receive Kosher Certification

August 25, 2009

Vista, CA

FOR IMMEDIATE RELEASE

Professional Water Technologies (“PWT”) recently obtained new or renewed approvals in England, Wales, Scotland and Israel. Leading products from PWT have also obtained kosher certification.

“We are happy to see PWT’s products obtain these approvals. These approvals are strategically significant as we expand the appeal of PWT’s pretreatment and maintenance chemicals worldwide,” says Stephen Dunham, VP After-Market Maintenance Solutions.

SpectraGuard SC™ approved for use in England, Wales and Scotland

PWT’s SpectraGuard SC™ liquid super concentrate antiscalant for reverse osmosis and nanofiltration membrane filtration systems has recently been approved by the Drinking Water Inspectorate for use by a water supply company for public water supply in England and Wales. SpectraGuard SC™ also received the corresponding approval for use in public water supply in Scotland. SpectraGuard SC™ is a high-performance 11x concentrate chemical pretreatment that controls inorganic scale, metals and colloids in reverse osmosis feedwaters while reducing membrane scaling tendencies and minimizing membrane cleaning requirements. These approvals now allow PWT to market the SpectraGuard SC™ to operators in all of Great Britain, a sizeable new market for PWT’s flagship product.

SpectraGuard™ approval for use renewed in Israel

The Department of Environmental Health of Israel’s Ministry of Health as recently renewed the SpectraGuard™’s approval for use in reverse osmosis systems for the production of drinking water. This renewed approval is valid for five years and allows PWT to continue to serve its long-time customers in Israel—which include some of the world’s largest water desalination plants—and pursue the development of new client relationships.

All PWT membrane pretreatment products certified kosher

PWT’s line of membrane pretreatment chemicals—antiscalants, biological fouling and organic fouling control products—have also been certified kosher according to the Jewish laws. Kosher certification enables the water produced by reverse osmosis and nanofiltration systems using PWT’s products to be consumed by members of the Jewish community. In addition, it allows for the water produced by systems using PWT products to be used in the food and beverage industry for the production of kosher certified products but also to be used as process water by companies in many other industries where kosher certification is a requirement in the production process.

These products, and more than 15 PWT products in total, also comply with ANSI/NSF Standard 60 requirements for drinking water chemicals and have obtained UL certificates of compliance.

Professional Water Technologies, Inc. specializes in the development, synthesis, and sale of specialty polymers to enhance the performance and economy of reverse osmosis and nanofiltration processes. PWT’s Membrane Forensics division specializes in membrane analysis and membrane process optimization.
