

# OptiClean E™

## Powdered Bioremediation Dispersant

OptiClean E™ is a non-surfactant, enzyme-free blend of nine strains of selectively adapted bacteria. This product was developed specifically to degrade animal and plant FOG (fats, oils and grease) in food processing plants and wherever added surfactants or enzymes are undesirable.

OptiClean E™ minimizes the need for physical removal, cleaning, rodding and jetting of grease buildup and skimmings in clarifiers, digesters, sand filters, drains and sewer collection lines. Packaged in self-dissolving eight ounce bags, OptiClean E™ is simple to apply and significantly improves effluent quality in activated sludge plants by reducing organics and enhancing flocculation. This product is designed to boost protozoan counts and diversity while improving organic removal efficiencies.

OptiClean E™ also promotes the initiation and stabilization of nitrification in:

- Waste Water Treatment Plants
- Meat & Poultry Processing Plants
- Vegetable & Plant Processing Operations
- Dairies & Bakeries
- Sewer Collection Lines & Drains
- Activated Sludge Plants of all types

Application of this product varies based on the dynamic nature and size of the treatment plant or procedure.

Please contact your local representative for application instructions or contact PWT directly at 760-639-4400.
